

# TOP 25 PERFORMING UNIVERSITIES IN PATENTS AWARDED

By U-Multirank

In this list we present the U-Multirank 2018 top performers on the indicator 'patents awarded (size-normalised)'. The number of patents is an established measure of technology transfer as it indicates the degree to which discoveries and inventions made in academic institutions are transferred to economic actors for further industrial/commercial development. Correcting for the size of the institution (overall student enrollments) enables a size-independent comparison of higher education institutions.
